Introduction

Etims is the e-invoicing system in Kenya. To integrate with it we need to integrate with a 3rd party system.

3rd Party System

For deals below 100,000 KSh, setup charge of 30,000 and per branch pricing of 12,000 per annum.

For deals of 100,000 KSh and above, setup charge of 30,000 once and per branch pricing be discounted to 10,000 per annum. (Negotiation ongoing)

dev@etims-api.co.ke

Getting Started with Technical

- Import this postman file into your postman software - [click here](#)
- Then, read etims api documentation - [click here](#)

API Credentials

Run postman using these api credentials.

- **Business PIN:** P052077586R
- **Branch ID:** 00
- **API Key (X-API-KEY):** etims-fc-2025-secure-api-key-9ffhksorghjlys

Big picture of what you need to do

1. Sync taxes, services and products
2. Submit invoices regardless of payment. Submit invoices in real time. Ignore proforma invoices.
3. When invoice cancelled submit credit note
4. Include a registration field called KRA PIN. Set this up in preferences so patients can provide it if required in patient details. It needs to be included in printouts e.g. like the GSTIN number some patients give in dermatech in their patient details. It is not mandatory.
5. Fetch tax notices and email customer

Developer Notes

1. In api calls header add as follows:
 - 'X-API-Key' => 'your-given-api-key',
 - 'Content-Type' => 'application/json'
2. URL
Put these URLs in web.config | appsettings with the keys as **etims-staging**, **etims-production**
 - a. **Test** : "https://api-sbx.etims.co.ke/api/v1/"

b. **Production:** "https://api-prod.etims.co.ke/api/v1/"

3. Clinicea **Tax master** has to be mapped to the **taxType** below

Tax Type Codes

Code Classification				
Code	Sort Order	Code Name	Code Description	
A	1	A	A -Exempt	
B	2	B-16.00%	B-16.00%	
C	3	C	C - 0%	
D	4	D	D - Non-VAT	

4. **paymentModes**

Payment Method

Code Classification		Code Classification Name		
Code	Sort Order	Code Name	Code Description	remark
01	1	Cash	Cash	
02	2	Credit	Credit	
03	3	Check	Bank Check Payment	
04	4	Card	Payment Using Card	
05	5	Mobile Money	Transaction using mobile money system	
06	6	Other	Other Means of Payment	

5. Clinicea Service or Product master needs to be synced in advance by calling **itemRegistration** API.
6. When calling the api, note that prices are always after tax ie SellingPrice should be after tax.
7. UnitOfQuantity should be coded. **Default value should be EA.** For now we will experiment keep it to always EA as technically liquid medicine will be sold as a bottle too.

All codes are as follows

- **Code Meaning**
- **EA** **Each**
- **KG** **Kilogram**
- **G** **Gram**

eTIMS Clinicea Integration Guide

- **L** **Litre**
- **ML** **Millilitre**
- **M** **Meter**
- **CM** **Centimeter**
- **BOX** **Box**
- **PK** **Pack**

8. PackagingUnit should be coded. **Default value should be EA.** For now we will experiment keep it to always EA as technically liquid medicine will be sold as a bottle too.

All codes are as follows

- **Code** **Meaning**
- **EA** **Each**
- **BOX** **Box**
- **PK** **Pack**
- **BT** **Bottle**
- **CT** **Carton**
- **BG** **Bag**
- **BL** **Bundle**

9. Item category should be auto picked up

Service → 42000000

Product → 51000000

10. Date format: **yyyyMMddHHmmss**. So 20260505143025 is 2026-05-05 14:30:25 ie `DateTime.Now.ToString("yyyyMMddHHmmss")`;

11. Invoice no: to be sent to etims has to be only NUMERIC. We need to discuss the best way to do this.

12. If credit note populate original invoice no: in `originalInvoiceNumber`. **For normal invoice skip this field.**

13. Credit note and regular invoice share the same sequence number. So LOCK the CLinicea preference to allow separate sequences for credit notes.

14. There is a field in submission called the **trader invoice number**, that is as is clinicea invoice number.

eTIMS Clinicea Integration Guide

15. Submit invoice date as bill create date and not invoice date. Too much backdated invoice is not allowed. This will prevent users from making mistakes.
16. Limit field size as follows
 - invoiceNumber - 35
 - itemClassCode - 10
 - itemCode - 20
 - itemName - 200
 - barcode - 20
 - packageUnit - 5
 - package - 13
 - quantityUnit - 5
 - quantity - 13
 - price - 18
17. Country Data field in patient details and lead details has to be mapped to [Country codes](#) like in NEHR and NABIDH.
18. Support emailing KRA notices. To do this you need to call the below URL once daily via a cron job
Endpoint: {{baseURL}}/api/reference/kra-notices
We will simply email the contents of the notice to the clinic admin.
19. Hardcode error handling in the code. These return codes from ETA means this. Display to end user. E-TIMS API Error codes
 - **Code SystemDescription**
 - 000 Server It is succeeded
 - 001 Server There is no search result
 - 891 Client An error occurred while Request URL is created.
 - 892 Client An error occurred while Request Header data is created.
 - 893 Client An error occurred while Request Body data is created.
 - 894 Client An error regarding server communication occurred.
 - 895 Client An error regarding un allowed Request Method occurred.
 - 896 Client An error regarding Request Status occurred.
 - 899 Client An error regarding Client occurred.
 - 900 Server There is no Header information
 - 901 Server It is not valid device
 - 902 Server This device is installed
 - 903 Server Only VSCU/OSCU device can be verified.
 - 910 Server Request parameter error
 - 911 Server There is no request full text
 - 912 Server There is a request Method error.
 - 921 Server Sales or sales invoice data which is declared cannot be received.

eTIMS Clinicea Integration Guide

- 922 Server Sales invoice data can be received after receiving the sales data.
- 990 Server The maximum number of views are exceeded
- 991 Server There is an error during registration
- 992 Server There is an error during modification
- 993 Server There is an error during deletion
- 994 Server There is an overlapped Data

UX Page

Add Integration page with these fields

[h1] eTIMS

[label: description] “Electronic Tax Invoice Management System” allows Kenyan taxpayers to do electronic invoicing.

[input fields]

- Business PIN
- Branch ID
- API Key [password]

FAQs

POST sendSales

Q1. Is it mandatory to include payment details while submitting an invoice, and does eTIMS require submission of invoices or payments?

Answer: Payment details are not mandatory, computation and calculation are based on line items. However you may include this data if you have it on Clinicea for validations and future summary reporting. Processing on eTIMS is not based on payments. Credit period or terms of payment are solely between the service provider and the customer. Submit total amount to ETIMS as soon as order is confirmed or an LPO is received/issued. Taxes are applicable at this point.

Q2. Can invoices be submitted in bulk (e.g., backdated invoices), or must they be sent in real-time?

Answer: Invoices should be sent in real-time, since the current date and time stamp is included before processing on eTIMS. Any backdated invoice transmitted will reflect on eTIMS in the current accounting date/month as this is the KRA requirement.

Q3. Are backdated invoices allowed (e.g., 1 month or 6 months old), and what if a clinic submits a missed invoice after a short delay (e.g., 2 days)?

Answer: No, KENYA VAT regulations do not allow for consolidated invoicing. Every transaction is accounted for separately and not in bulk. However, submitting a missed invoice after a short delay does not create issues, but it will be recorded under the current accounting date/month. Clinics should be trained to always finalize a bill and process on eTIMS.

Q4. In the sendSales API, customer PIN is required — what should be used for patients if PIN is not available?

Answer: Customer details are optional. If the customer does not provide a PIN/NAME you can send empty string. PIN is only mandatory if the customer intends to claim the input VAT or the entire invoice as an expense. If PIN is empty, you can put the patient name under the name field.

Q5. What are the supported payment modes that can be used? Are there codes for it?

Answer: These modes are documented; cash, credit, cash/credit, bank, cheque, card, mobile money, mpesa, or mobile however if you use any code from 01-07 the system picks as 'Other' payment mode

Q6. In practice, clinics often edit an invoice at the end of the day to add any missing consumable or inventory item. Since we would have submitted the invoice in real time, how should we handle this change? In other countries we submit invoices at the end of the day letting users make edits, and then after submission we lock the invoice from editing. How should this be handled in Kenya, do your other customers handle editing of invoice?

Answer: Yes, editing of invoices is allowed, in Kenya the allowed approach is through credit note if an invoice was already processed on ETIMS. IF NOT, you can first ensure that once the invoice is locked internally for further additions or editing that's when it's processed on ETIMS. Tie the closure of bill process to validation on eTIMS.

Q7. Does eTims require submission of invoices primarily or payments. Context being, that for 1 invoice I got 20% payment and submitted it to ETIMS. After 7 days I got the balance 20% payment, do I need to resubmit the same invoice again with the 80% of the payment I got?

Answer : Processing on eTIMS is not based on payments. Credit period or terms of payment are solely between the service provider and the customer. Submit total amount to ETIMS as soon as order is confirmed or an LPO is received/issued. Taxes are applicable at this point.

POST GenerateInvoiceNumber

Q7. Is calling this API (Generate invoice no) mandatory, or can we use our own invoice numbering system?

Answer: You can use your own numbering system however note that it should be a global counter (unique) and incremental shared for invoices and credit notes.

Q8. Can invoice numbers be alphanumeric, or must they be numeric?

Answer: Invoice numbers must be a numeric, trader invoice number can be alphanumeric.

Q9. What is the maximum allowed length for invoice numbers?

Answer: The maximum length of invoice numbers is 35.

POST sendCreditNote / GenerateInvoiceNumber

Q10. Can the sequence number for credit notes be different from regular invoices?

Answer: Sequences should be the same and incremental.

Q11. I did not get the difference between Invoice number vs. Trader invoice number. Our clients are medical clinics and they use alphanumeric sequence number with a prefix followed by a incrementing number ex: GDE1061, GDE 1062 etc.

Answer: Trader invoice number - is your internal (Clinicea) bill number which can be alphanumeric e.g GDE1061from the examples you have shared.

Invoice number is a unique global counter which is numeric and what eTIMS uses to validate each transaction.

POST itemRegistration api

Q12. What are the maximum length constraints for item fields?

Answer:

itemClassCode - 10

itemCode - 20

itemName - 200

barcode - 20

packageUnit - 5

package - 13
quantityUnit - 5
quantity - 13
price - 18

Q13. For the patient registration form, we plan to add an input field for PIN. Will patients understand what this refers to? If not, what label or text should be used for this field?

Answer: Patients will understand if it is labeled as “KRA PIN.” However, not all patients will provide it—only those who are interested in claiming the invoice or using it for tax purposes.

Q14. Is decimal quantity allowed? If yes, what precision is supported?

Answer: Up to 6 Decimals are allowed for unit price and amount.

Q15. What will be the process if a client wants to sign up for eTIMS? What information is required from them, and what configuration values will be provided to integrate with our system (Clinicea)?

Answer: Documents required from the client:

- Copy of Business KRA PIN
- Copy of Director’s PIN
- Copy of Director’s ID

Credentials provided for each taxpayer/client:

- API Key
- Branch ID
- Business PIN

Q16. Does KRA PIN of the patient require validation?

Answer : Yes. The patient KRA PIN is validated before submission. If the KRA PIN format is invalid, the validation will fail and the invoice submission process will be blocked until a valid KRA PIN is entered.

The implemented validation algorithm performs the following checks:

- Validation happens only when the Tax Settings section is enabled/visible.
- The entered value is trimmed to remove leading and trailing spaces.
- The KRA PIN must be exactly 11 characters long.
- The format must follow:
 - First character must be an alphabet
 - Middle 9 characters must be numeric digits
 - Last character must be an alphabet

eTIMS Clinicea Integration Guide

Example of valid format:

A123456789Z

The validation uses a regular expression pattern equivalent to:

`^[A-Za-z]\d{9}[A-Za-z]$`

If the entered value does not satisfy this pattern, the system displays a validation error message and prevents further processing until corrected.

Q17. How are write-off cases handled in eTIMS?

Answer : In write-off cases, a Credit Note must be submitted. Example: if the original invoice amount is 100 and only 60 was paid, while the remaining 40 is being written off, then a Credit Note of 40 must be generated and submitted to eTIMS. The Credit Note submission should contain the original invoice item details synchronized proportionately with the adjusted amount. This is required because eTIMS expects the Credit Note items to match the original invoice items.

Q18. Is there any limitation in Credit Note submission?

Answer : Yes. eTIMS requires that the Credit Note item structure matches the original invoice item structure. Because of this limitation, the original bill items must be preserved and adjusted proportionately during Credit Note generation instead of sending completely different items.

Q19. Is country required during invoice submission?

Answer : No. Country is not required during invoice submission. Country is required only during Item Code Registration.

Q20. How is the Item Code generated for eTIMS registration?

Answer : GUID-based item codes are not directly readable because GUIDs are 36 characters long, while Clinicea item codes are generally much smaller and user-friendly. Therefore, the generated item code format follows this structure:

- Country Prefix (Example: KE for Kenya)
- Clinic/Organization Code
- Encrypted GUID converted into alphanumeric format without special characters

This ensures uniqueness while keeping the code compliant and readable for eTIMS registration purposes.

Q21. Are item registrations clinic-wise or shared across clinics?

Answer : Item registrations are clinic-wise. Even if multiple clinics belong to the same organization, each clinic will have its own branch code, API key, and registration setup. Therefore, item registration is maintained separately for every clinic.

Q22. How are package penalty items handled during registration?

Answer : In package billing scenarios, an additional item called “Package Penalty Charges” is registered separately. This is required because eTIMS does not allow invoice submission for unregistered items. Since package allocations may internally split into multiple service components, the additional registered package item ensures successful submission compliance.

POST kra-notices api

- Tax notices issues by the authorities to the clinic
- Fetch it once daily via a cron job

 **Important Note:** After successful submission of the KRA/eTIMS invoice, the API response will return JSON data containing the **Control Unit Information** and the **QR Code** [details](#). We need store in our blob and read when we open invoice

 **Invoice Requirement:** The Control Unit Information and QR Code must be displayed on the Clinicea invoice.

 **QR Code Behaviour:** When the QR Code is scanned, it should open the corresponding eTIMS invoice that was submitted to the tax authority.

 **Data Consistency Requirement:** The final invoice total, tax values, and item details should match exactly between the Clinicea invoice and the eTIMS invoice response.
